

Internet Security Notice

It has come to our attention that variants of the SpyEye malware are targeting Internet Banking websites and we would like to remind our users to update their anti-virus software with the latest virus signatures. You should also do a full virus scan before using any online banking service if you suspect your computer is affected.

The SpyEye malware targets customer by copying bank's login page with modification on information request flow. Please take note:

- If at any time, the screens in the login or OTP flow look suspicious, please do not continue with the transaction
- if you receive an Online Authorisation Code (OAC) with a payee name that you did not set up, please do not continue with the transaction
- At no point of our online banking login flow should you see a screen that says "Security verification in progress", "Please wait 10 minutes"
